Problem & Solution

The Problem

University students face unprecedented levels of academic stress and anxiety, yet significant barriers exist to accessing help:

- Stigma
- Resource Scarcity
- Fragmentation
- Lack of accessible mental health support

The Solution: NeuroVerse

A centralized, highly accessible digital ecosystem designed specifically to bridge the mental health gap on campuses.

- Self-Help Tools
- Anonymous Community
- Professional Support

NeuroVerse

Student Mental Wellness Platform

Motivation

**MAIN INCREASING MENTAL STRESS
AMONG STUDENTS PROBLEM**

**LACK OF STUDENT-FOCUSED MENTAL
HEALTH PLATFORMS**

Sustainable Development Goals

1.No Poverty

2.Zero Hunger

3.Good Health and Well-being

4.Quality Education

5.Gender Equality

.....

.....

.....

16.Peace, Justice & Strong Institutions

17.Partnerships for the Goals .

Existing Studies & Systems

Mood tracking system

Mental Health Starts with You

MindDoc supports you on your journey toward better mental health.

Meditation & stress relief

Everyday support for a healthier, happier you

ons using Headspace to reduce stress and sleep

Try for free

Online therapy system

venient and affordable therap
BetterHelp.

ill match you to one of 32,000 licensed therap
our location, preferences, and therapist availa

Help us match you to the right ther

of therapy are you looking for?

Problem in Existing Systems

F

- Not specifically designed for students
- Lack of anonymous peer support communities
- Few systems focus on Bangladeshi student context
- All the services are in several platform

Methodology: Agile Scrum Framework

WE UTILIZE THE AGILE SCRUM FRAMEWORK TO MANAGE COMPLEXITY, ADAPT RAPIDLY TO FEEDBACK, AND ENSURE THE FINAL PRODUCT EFFECTIVELY MEETS THE NUANCED NEEDS OF STUDENTS.

SPRINTS

Development is structured in strict two-week cycles, ensuring rapid iteration, frequent testing, and consistent delivery of functional features.

ROLES

Clear responsibilities defined by Product Owner (vision), Scrum Master (process), and the Development Team (execution).

CEREMONIES

Structured communication via Daily Stand-ups for blockers, Sprint Planning for scoping, and Reviews for demonstration.

Context Diagram

CONTEXT DIAGRAM

Methodology

REQUIREMENT ANALYSIS

Identify student mental health needs.

SYSTEM DESIGN

Design UI, database, and architecture.

SYSTEM DEVELOPMENT

Develop frontend and backend modules.

TESTING & DEPLOYMENT

testing & Launch the system as a web platform.

System Architecture: The MERN Stack

NeuroVerse leverages the MERN stack for its unified JavaScript environment, allowing for rapid development, flexibility, and high scalability.

- 1. Frontend : React, Vite, and Tailwind CSS
- 2. Backend : Node.js
- 3. Database : MongoDB

✓ **This platform will provide a safe digital support system for students.**

Cloud Implementation: MongoDB Atlas

Scalability:

Auto-scaling clusters to effortlessly handle spikes in user activity during high-stress periods.

Reliability:

Built-in redundancy, managed automated backups, and 99.99% uptime guarantees.

Security:

End-to-end encryption and robust VPC peering to protect highly sensitive wellness data.

A screenshot of a code editor window titled 'config/db.js'. The code is written in JavaScript and uses the Mongoose library to connect to a MongoDB database. It includes an import statement for Mongoose, an asynchronous function 'connectDB' that attempts to connect using 'process.env.MONGO_URI', and a try-catch block for error handling. The code also logs the connection status and exits the process with an error code if the connection fails.

```
import mongoose from 'mongoose'; const connectDB =  
async () => { try { const conn = await  
mongoose.connect(process.env.MONGO_URI);  
console.log(`MongoDB Connected:  
${conn.connection.host}`); } catch (error) {  
console.error(`Error: ${error.message}`);  
process.exit(1); } }; export default connectDB;
```

Backend Implementation: Secure Authentication

The Flow:

Upon successful login, the server generates a JWT and signs it securely.

Delivery:

The token is sent to the client via an HTTP-only cookie, heavily mitigating XSS attacks.

Protection:

Custom Express middleware verifies the token on protected routes, attaching the user object to the request.

middleware/auth.js

```
// Route Protection Middleware const protect = async
(req, res, next) => { let token = req.cookies.jwt; if
(token) { try { const decoded = jwt.verify(token,
process.env.JWT_SECRET); req.user = await
User.findById(decoded.userId).select('-password');
next(); } catch (error) { res.status(401); throw new
Error('Not authorized, invalid token'); } } else { //
Handle missing token } };
```

Frontend Implementation: Wellness Dashboard

React:

Harnessing optimized build processes and Hot Module Replacement for a seamless dev experience.

Tailwind CSS:

Utility-first styling ensures a cohesive design system without bloat or CSS conflicts.

Modular Architecture:

Component-based structure allows for independent updates to Sleep, Mood, and Hydration widgets.

components/Dashboard.jsx

```
const Dashboard = () => { const [moods, setMoods] =
useState([]); useEffect(() => { const fetchData = async
() => { const { data } = await axios.get('/api/moods');
setMoods(data); }; fetchData(); }, []); return ( <div
className="grid grid-cols-1 md:grid-cols-2 gap-6 p-6">
<MoodWidget data={moods} /> <HabitTracker />
<JournalPreview /> </div> ); };
```

Mood Tracking

Log your daily emotions and identify patterns over time with our intuitive tracker.

Anonymous Community

Share your struggles and connect with peers safely without revealing your identity.

Expert Therapists

Book secure teletherapy sessions with licensed professionals specializing in student issues.

Mental Health Courses

Access structured, self-paced masterclasses designed to build resilience and coping skills.

Emergency Help

Immediate access to crisis hotlines and urgent support resources when you need them most.

Progress Dashboard

Visualize your wellness journey, journal entries, and habit streaks all in one place.
